DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submissions filed on 06/28/2007 and 08/09/2007 has been entered. Claims 1-32 are pending.

REASONS FOR ALLOWANCE

2. Claims 1-32 are allowed.

The following is an examiner's statement of reasons for allowance:

- With regard to independent claims 17 and 1, as the closest reference of record, Gill (US 6,822,836) discloses a magnetic read head having a free layer with enhanced stability and signal strength, comprising: a pair of opposing permanent magnet layers, separated by a first gap and magnetized in a first direction, that abut, and do not overlap in any way, including through direct connection to another magnetic material, said free layer, thereby providing longitudinal bias thereto; above said permanent magnet layers, a pair of opposing additional bias layers that are separated by a second gap that is less than said first gap; **but fails to show** said additional bias layers being magnetized in a second direction that is antiparallel to said first direction, thereby partly canceling said longitudinal bias with no accompanying weakening of the free layer at the free layer edge.

- With regard to independent claims 25 and 9, as the closest reference of record, the combination of Gill (US 6,822,836) and Nagasaka et al (US 2003/0123200) discloses a magnetic read head having a free layer with enhanced stability and signal strength, comprising: a pair of opposing permanent magnet layers, separated by a first gap and magnetized in a first direction, that abut, and do not overlap in any way, including through direct connection to another magnetic material, said free layer, thereby providing longitudinal bias thereto; a distance below said permanent magnet layers, a pair of opposing additional bias layers that are separated by a second gap that is less than said first gap; but fails to show that said additional bias layer being magnetized in a second direction that is antiparallel to said first direction, thereby partly canceling said longitudinal bias with no accompanying weakening of the free layer at the free layer edge.
- Applicant asserts; "an object of at least one embodiment of the present invention to provide a magnetic read head device whose output is both stable as well as unaffected by the steps taken to achieve said stability" (Specification, p. 5).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
